

# Gumbies

Spring/Summer 2023

## Gumbies

Ambitious adventurer Michel Maurer created Gumbies after his quest for “real living” led him to search for the perfect flip-flop.

By combining entrepreneurial spirit, a solid ethical foundation and natural creativity, he conceived the ‘Islander’. This marked the beginning of a brand that would reflect his passion for simplicity, necessity and, most importantly - freedom, both now and into the future.

Fast-forward to today - Gumbies is still committed to those values. We utilise natural and sustainably sourced materials to craft minimalistic, comfort-driven footwear in vibrant, contemporary styles.

Every pair of Gumbies represents not only Michel’s enthusiasm for sustainability, non-conformity and adventure but the promise of a unique ‘Walkabout’ for each and every wearer.

# Materials

## Gumtread™

We chose recycled rubber as the base material for our innovative outsoles with the dual purpose of flexibility and durability in mind. This second-life material avoids the need for further rubber farming, which often involves environmentally damaging forest clearance.

## Recycled Plastic

We use straps made from rPET (recycled plastic bottles) on some of products such as the Duckbill or Scrambler Sandals. These straps are strong, durable and water resistant.

## Recycled Textiles

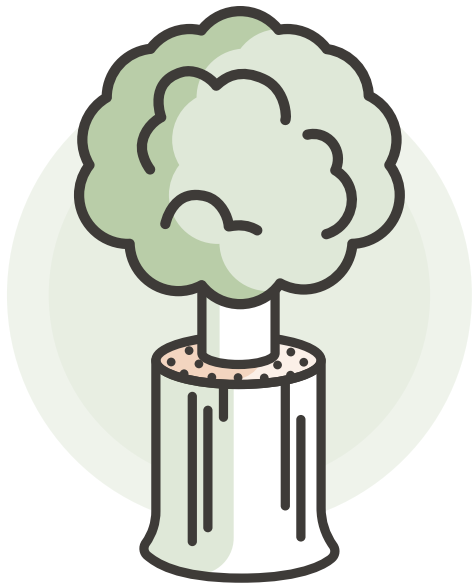

Reclaimed and recycled cotton and other textiles from product and other sources are used inside of the straps of many of our flip-flops like the Islander. This helps reinforce and give shape and structure to them.

# Materials

## TreEVA™

TreEVA is an ultra-comfortable material pioneered by Gumbies in our pursuit of authentic feel-good footwear. It is formed from a combination of EVA and wood chippings, a natural material that reduces the need for man-made plastics.

## Cork

Our sustainably-sourced natural cork footbeds are breathable, water-resistant, durable, anti-microbial and ultra-comfortable.

Cork is a natural and sustainable material which is sourced from the world large produce, Portugal.

## Natural Fibres

Jute fibre is used to reinforce the soles for many of our products. This natural fibre helps give the recycled rubber something to bond to as well as reducing the weight of the flip-flops.

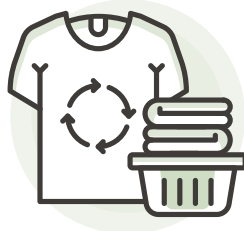

## Islander Flip-Flops

The Islander flip flop follows the contours of the foot, the arch of the sole and most importantly provides comfort between the toes.
